***FOR IMMEDIATE RELEASE***

## **Environment 21, LLC Introduces ESK Koala High Efficiency Oil/Water Separator to North American Market**

**East Pembroke, New York- July 20, 2009:** Environment 21, LLC today announced the introduction of a new high efficiency oil/water separator called the ESK Koala. The announcement was made by Jeffrey Benty, Director of Sales and Marketing of Environment 21, LLC.

The ESK Koala Oil/Water Separator is an established product within the European market and has been tested under European Standards. The overall tested performance of the ESK Koala shows an amazing removal efficiency with discharge rates as low as 2 PPM.

Combine these amazing removal efficiencies with its ability to fit in standard precast concrete manholes and you find yourself with one of the most economically efficient oil/water separator products available in the country.

“We see the ESK Koala as a natural fit for the Environment 21 Product Line and recognize it as another high quality product Environment 21 is able to offer its clients.,” stated Benty.

For additional information contact Environment 21, LLC at (800)809-2801 or [www.Env21.com](http://www.Env21.com).
